

Data Usage Settings Applet

Switches between wi-fi data and cellular data

The outer circle signifies how much of the billing cycle has passed. This allows the user to quickly see that if the outer circle is less than the inner, he's going to run out of data before the month is over if he continues with the same rate.

For values outside the range of the slider, the 1.5GiB value is a text input.

This slider changes the 1.5GiB value inside the circle in real time.

Sensible min-max should be used.

See datepicker (<https://github.com/qwazix/glacier-controls-spec/blob/master/timepicker/datepicker.pdf>) for the interaction once the user clicks on this entry

This is the Data Usage page of settings.
