## Notes

The dialer page of the phone app.

When the user types the numbers, relevant contacts appear above. These relevant contacts can be either contacts that their phone number contains the numbers typed, or contacts that their name starts with the corresponding letters (for example 6453 should show all the Mikes in contacts as well as any phone numbers that start with, or contain 6453)

Text for the number to be called

A] t.xl

🟨 padding.medium

The whole page should be inside a flickable, since the top space is too short to scroll comfortably.

When the user taps on the input, the numpad should slowly scroll back into view
